EM354: 1.1 Diagnosis of Lower Limb Running Injuries: Practical Aspects

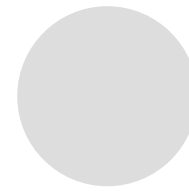

DAVIDE VALLESIO

PT, OMPT

RENZO ALESSANDRO RAIMONDI

PT, OMPT, DO

JEAN-FRANCOIS ESCULIER

Brand new 2-day practical course, complementary to course 1.0 "New developments in the prevention of running-related injuries". It presents the diagnostic tests and evaluation methods used by the experts. To master perfectly the diagnostic tests of non-traumatic pathologies. The course that allows you to have greater precision and accuracy in clinical reasoning. Many new ideas for you and your patients!

Based on the most recent studies and scientific evidence, participants will be guided to achieve the following objectives and skills:

- ✓ know the diagnostic tests for non-traumatic injuries of the lower limbs;
- ✓ learn how to perform each clinical test for lower quadrant injuries by putting it into practice;
- ✓ understand the logic behind the evaluation of a runner;
- ✓ know the reliability of the clinical tests performed;
- ✓ select the most appropriate treatment techniques for each of the pathologies identified;
- ✓ follow a clinical reasoning suitable for each patient and pathology
